

We are the brightest

The **visibility** quiz.

The quiz tells you how much the children know about the topic of visibility. You can do it before sharing the knowledge, or afterwards to check how well the children have understood the topic.

The quiz is also available online.
It is ideal for solving problems together

Quiz

«How bright are you?»

Question 1

When should you wear reflectors or lights?

- A: Never
- B: Whenever it's not light outside or when visibility is poor.
- C: Only at night.

Correct: B

Visibility is always important when it's not light outside. This can happen in many situations:

- When it's dark.
- At dawn or dusk (morning and evening)
- In bad weather such as fog, rain or snow.

It's worth being prepared for situations like these and carrying reflectors with you at all times, for example.

Question 2

Where should you wear reflectors and shine?

- A: Front of your body
- B: On your arms
- C: On both your arms and legs at least

Correct: C

You don't know which side other road users are passing you from. That's why you should be visible from everywhere. Wear reflectors on your front, back and sides. You'll stand out particularly well if you reflect light on both your arms and legs. Moving body parts stand out particularly well.

Question 3

You can pick out a new jacket. Which colour is best for keeping yourself safe?

- A: Black or dark blue
- B: Bright, vibrant colours
- C: It doesn't matter

Correct: B

You'll stand out a lot better with bright, shiny clothes. A high-visibility vest or neon-coloured clothes with reflectors are ideal.

Question 4

What lights and reflectors do you need when you're out and about on your bike?

- A: None – if you ride fast, you'll stand out anyway.
- B: Reflectors and one light on your bike are enough.
- C: Reflectors, one light at the front and one light at the back, plus other reflective elements on your helmet and body.

Correct: C

The law says that bikes must have two stationary lights (white at the front, red at the back) and a reflector when it's dark. We suggest you be even more visible. You can do this in the following ways:

- Reflectors on the spokes
- A safety wing
- Bright clothes
- Reflectors on your clothes and helmet

Question 5

Should your schoolbag glow too?

- A: It's not that important. There's nothing in there apart from books and my pencil case.
- B: It can't hurt.
- C: Yes, absolutely. Many cars come from behind; it's important that they see you from a distance.

Correct: C

Especially when cars are approaching you from behind, your safety is very important. Protect yourself and your back with reflectors on your school backpack.

Question 6

Why is visibility so important, especially in autumn and winter?

- A: The sun rises later and sets earlier. That's why it's often dark outside and it's hard to see you.
- B: Light gives off heat when it's cold outside.
- C: Lights in the winter are nice; that's why we have Christmas lights.

Correct: A

Motorists will see you from a distance in good lighting conditions. But in autumn, winter and early spring, the days are shorter and it's darker more often. That's why it's important that you always make yourself clearly visible when you're out and about.

Quiz

«How bright are you?»

Please tick the correct answer.

Question 1

When should you wear reflectors or lights?

- A: Never
- B: Whenever it's not light outside or when visibility is poor.
- C: Only at night.

Question 2

Where should you wear reflectors and shine?

- A: Front of your body
- B: On your arms
- C: On both your arms and legs at least

Question 3

You can pick out a new jacket. Which colour is best for keeping yourself safe?
